

Generator air inlet shutter size

Overview

Actual air inlet opening size in the building should be equal to or greater than 576 square inches. (An opening that measures 24 X 24 inches (576 square inches) would be adequate in this case to achieve the required 1125 Cu. Portable & small standby units. Heat radiates directly from engine. 5x - 2x) depending on blade. The inlet shutter is generally located at the rear end of the generator, and the exhaust shutter is located at the position corresponding to the inlet shutter. 28 then we get ventilation in cu. 6 to 8 inch dia duct fan would work. are you doing elevated on. Manufacturers typically provide airflow requirements in cubic feet per minute (CFM), which you can use as a guideline. Type of Generator Portable Generators: These are often used outdoors and benefit from natural airflow, but placing them too close to walls or other obstructions can limit.
