Understanding the amperage. This law states that power (P) in watts is the product of current (I) in amps and voltage (V) in volts, which can be expressed as: $P=V \times I$. Therefore, to find the current, one can rearrange the formula to: $I=P/V$. For a 550-watt panel, a simple calculation would involve dividing 550 watts by an. A 550W panel can be described in two different amp numbers: This is tied to I_{mp} on the spec sheet and often sits in the teens of amps. Understanding how much power these panels can generate is crucial for homeowners, businesses, and energy enthusiasts alike. 5A (since $550W \div 38V \approx 14$).
