

# How much does it cost to generate electricity at a power station

## Overview

Gas, nuclear and coal energy generation cost between \$30 and \$75 per MWh from fully depreciated plants, but including the price of building facilities, this was more in the range of around \$50 to \$110 for combined-cycle gas, \$70 to \$170 for coal and \$140 to \$220 for. How much does it cost to generate electricity with different types of power plants?

- Frequently Asked Questions (FAQs) - U. Energy Information Administration (EIA) Crude oil, gasoline, heating oil, diesel, propane, and other liquids including biofuels and natural gas liquids. Average power plant operating expenses for major U. These are costs per unit of energy, typically represented as dollars/megawatt hour (wholesale). The calculations also assist governments in making decisions regarding energy policy. On. Projected change in price by fuel type, 2022-2050 Solar, wind, and hydropower are based on the projected levelized cost of energy, which includes capital expenditures and operating costs, while natural gas, coal, and nuclear are based on the projected cost of only the heat content of these plants. This chapter gives an overview of the cost of electricity generation.
