

How to adjust the brightness quickly with solar power supply

Overview

It is important to make sure that the solar panel is in direct sunlight for as much of the day as possible. If there is a tree or other object blocking the sun, then move the light to a different location. If you have a large garden. The solar panel can become dirty over time, which will affect how well it absorbs sunlight. Use a soft cloth to clean the panel and remove any dirt or debris. We have a full article on how. Solar lighting installed outside and exposed to the elements will build up grime over the lens, causing a filtering of the light through a layer of dirt. The fix is a good old Windex and paper towel. The rechargeable batteries in solar lights will eventually lose their charge, which will affect how brightly the light shines. If the batteries seem to be losing power and not lasting as long. Take a look at a rechargeable battery and you will notice on the side there is a mAh number. The 1.2V will remain the same from AA batteries but the lower the mAh your lights have.
