

How to calculate the cost of base station batteries

Overview

This value is commonly calculated using Levelized Cost of Storage (LCOS). Major cost factors include: The simplified LCOS equation is: $LCOS = \frac{\text{Total Lifetime Costs}}{\text{Total Lifetime Energy Delivered}}$ Lower LCOS values indicate more efficient and economically competitive. How much does a battery energy storage system cost?

In 2025, the typical cost of commercial lithium battery energy storage systems, including the battery, battery management system (BMS), inverter (PCS), and installation, ranges from \$280 to \$580 per kWh. Larger systems (100 kWh or more) can cost. Quoting a simple “price per kWh” for a Battery Energy Storage System (BESS) is like quoting the price of a building based solely on the cost of the bricks. A complete BESS includes several major components: For large utility-scale projects, the installed cost of a BESS. For commercial and industrial energy managers, evaluating the cost of battery energy storage system goes far beyond the initial purchase price.
