

How to use the backup power supply for Phnom Penh base station communication

Overview

Quick Switch: The Power Supply Management System (PSMS) automatically detects the outage and activates backup supply. Operators should confirm switching success via remote monitoring, checking battery voltage ($48\text{ V} \pm 2\text{ V}$) and load current stability. Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO_4) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability. According to industry standards, remote mountain sites should be equipped with energy storage batteries that can support at least 8 hours of backup power. For urban core sites, where loads are higher due to 5G. This back-up power supply is designed specifically for communication base stations, ensuring uninterrupted operation during power outages. Choosing the appropriate standby power supply is very important for the stable. When natural disasters cut off power grids, when extreme weather threatens. Remote base stations and telecom towers often face significant challenges when it comes to a consistent, reliable power supply. This article provides a detailed.
