## Overview

A groundbreaking photo-assisted lithium-sulfur battery (LSB) is constructed with CdS-TiO<sub>2</sub>/carbon cloth as a multifunctional cathode collector to accelerate both sulfur reduction reaction (SRR) during the discharge pr. ••A photo-assisted reversible lithium-sulfur battery (LSB) is. Because of the severe environmental problems caused by the use of fossil fuels, the transformation of the energy structure to explore more sustainable energy becomes an urgent trend. Different from traditional LSBs, the photo-assisted LSB has a transparent window and a porous cathode, so that the semiconductor can be irradiated by the solar light (Sche. This work demonstrates a new methodology for constructing a photo-assisted reversible Li-S battery with a 100% energy efficiency. A heterostructured CdS-TiO<sub>2</sub>/CC photocat. ### Molecular Electrocatalysts in Lithium-Sulfur Batteries

Lithium-sulfur (Li–S) batteries face challenges due to the sluggish reaction kinetics of sulfur species, which reduces sulfur utilization and thus lowers performance.

Molecular electrocatalysts, with their clear and ...

### Rational design of Lithium-Sulfur battery cathodes based on ...

Based on first-principles calculations, Zhang et al. revealed that van der Waals (vdW) interaction and chemical interaction between 2D layered materials and  $\text{Li}_2\text{S}_n$  ( $n = 2, 4, 6, 8$ ) species contribute to their adsorption. This indicates that electron transfer from LiPSs to anchoring materials, or redox of anchoring materials prior to  $\text{S}_8$ , may occur during beginning ...

A review on lithium-sulfur batteries: Challenge, development, and ...

Lithium-sulfur (Li-S) battery is recognized as one of the promising candidates to break through the specific energy limitations of commercial lithium-ion batteries given the high theoretical specific energy, environmental friendliness, and low cost. Over the past decade, tremendous progress have been achieved in improving the electrochemical performance ...

Recent advances in shuttle effect inhibition for lithium sulfur batteries

Lithium-sulfur (Li-S) batteries are one of the most promising batteries in the future due to its high theoretical specific capacity ( $1675 \text{ mAh g}^{-1}$ ) and energy density ( $2600 \text{ Wh kg}^{-1}$ ). However, the severe capacity fading caused by shuttle effect of polysulfide needs to be addressed before the practical application of Li-S batteries.

Application and research of current collector for lithium-sulfur battery

With the increasing demand for high-performance batteries, lithium-sulfur battery has become a candidate for a new generation of high-performance batteries because of its high theoretical capacity ( $1675 \text{ mAh g}^{-1}$ ) and energy density ( $2600 \text{ Wh kg}^{-1}$ ). However, due to the rapid decline of capacity and poor cycle and rate performance, the battery is far from ideal in ...
