

Pakistan s solar panels and solar panels

Overview

As electricity prices doubled from 2021 to 2024, and Chinese solar panel manufacturers with manufacturing overcapacity cut prices, Pakistanis have taken to installing solar panels around the country, importing \$1.4 billion of panels from China in the first half. As of 2025, solar power was the largest electricity source in Pakistan, accounting for more than 25% of total production in 2025. In 2024, solar power installations in the country grew at a high rate with solar installations providing an estimated one-third of the country's entire generating. The solar boom continues in Pakistan, thanks to China, which has already exported 7.5 GW panels to the country between January and March 2025, up 1 GW over last year. (Photo Credit: Renewables First) In 2024, Pakistan emerged as a surprise solar market, importing 16 GW worth of Chinese solar. A solar panel system in Pakistan offers a reliable and eco-friendly solution, allowing households and enterprises to generate their own electricity while reducing dependence on the national grid. Investing in a solar electricity system in Pakistan not only helps cut down monthly electricity bills. Pakistan has emerged as one of the world's fastest-growing solar markets, importing around 50 GW of panels amid falling prices and widespread adoption across sectors — but comprehensive data on actual installations remains limited. In 2026, N-type TOPCon modules from brands like Jinko and LONGi deliver the best efficiency per rupee, while JA Solar leads on value for money. Solar energy has become the most practical solution.
