

Ranking of foreign solar power generation

Overview

The top five countries are China, United States, India, Japan, and Germany, based on solar power generation and installed capacity. Solar power is clean, green, inexpensive, and renewable energy that is produced when sunlight strikes human-made solar cells and is subsequently converted into electricity. Solar power plants use one of two technologies: Photovoltaic (PV) systems use solar panels, either on rooftops or in. As a result of legislative changes and near-saturation levels in key markets, the demand for solar-power installations is decreasing, and in 2026, this will drop for the first time since the industry became a worldwide force 20 years ago. Based on data from the Bloomberg New Energy Finance (BNEF). China was the world's largest producer of solar energy in 2025, according to data by energy think tank Ember. 6 GW capacity – equivalent to Singapore's entire land area and capable of powering millions of homes annually. In 2025, solar power is the cornerstone.

List of countries by renewable electricity production

This is a list of countries and dependencies by electricity generation from renewable sources. Renewables accounted for 32% of electric generation in 2024.

Top Solar Power Countries in 2025: Leading the Global

In 2025, solar power is the cornerstone of the global energy transition, with photovoltaic (PV) systems generating over 2,000 terawatt-hours (TWh) in

Science News, Educational Articles, Expert Opinion

The Scientist offers independent, award-winning science journalism, covering the latest life science research, insights, and innovations.

Leading solar power producing countries 2024| Statista

China continues to dominate the global solar power landscape, producing a staggering ***** terawatt hours of solar energy in 2024.

Infographic: China Is the World Leader in Solar Power Generation

This chart shows electricity generated by solar power in 2025, by country (in TWh).

Solar power by country

OverviewAsiaGlobal use figuresAfricaEuropeNorth AmericaOceaniaSouth America

Armenia due its geographical and climate properties is well-suited for the solar energy utilization. According to the Ministry of Energy Infrastructure and Natural Resources of Armenia the country is capable of producing 1850 kWh/m per year. For comparison European countries are capable of around 1000 kWh/m per year on average. Two main panel types utilized in Armenia are the photovoltaic and thermal solar panels. The
