

Slovenia electricity consumption

Overview

Final energy consumption in Slovenia in 2024 was over 196,000 TJ or 3% more than a year earlier. Consumption in the transport sector represented the highest share (42%), followed by manufacturing and construction (24%), households (22%), service activities (9%) and other users. This interactive chart shows the average energy consumption per person each year. These figures reflect energy consumption — that is the sum of all energy uses including electricity, transport and heating. Many people assume energy and electricity to mean the same, but electricity is just one. In May 2025, total net electricity generation was 1,261 GWh. Energy dependence decreased by 3 percentage points. In each data section below, every line is one column: its values are listed in row order and align by position across columns — the Nth value in every column belongs to the same record. *Note:. The data reached an all-time high of 1,278. SI: Electricity: Available to Internal Market data remains active status in CEIC and is reported by Eurostat. 9 toe (4% higher than the EU average in 2023). Graph: CONSUMPTION TRENDS BY ENERGY SOURCE (Mtoe) The country's total consumption declined by 3.
