

# Technical regulations for photovoltaic power station brackets

## Overview

In many European countries, regulations require equipotential grounding of metal frames to prevent shock or electrical arc risks. The clamps must be conductive and compliant with the IEC 62548 standards, which specify the requirements for the electrical installation of photovoltaic. IEC 62548:2016 sets out design requirements for photovoltaic (PV) arrays including DC array wiring, electrical protection devices, switching and earthing provisions. Additionally, the Life Cycle Assessment methodology is also regulated by standards. In this chapter, the three levels are presented. 8 When screw-fixing brackets directly to metal roof cladding the roof-sheet thickness shall be checked to. National standard for photovoltaic bracket bodies that set standards for photovoltaics. The spans are connected by struts, with the support cables having a height of 4.
