

The ultimate solution for energy storage

Overview

Pumped storage hydropower is the largest energy storage technology globally. It works by pumping water into reservoirs when there is an electricity surplus in the grid, for example on a sunny or windy day, and releasing it to generate electricity when more energy is needed. While today's energy producers respond to grid fluctuations by mainly relying on fossil-fired power plants, energy storage solutions will take on a dominant role in fulfilling this need in the future, supplying renewable energy 24/7. Dennis She, Vice President of LONGi, comprehensively outlined the company's global energy storage strategy for the first time and introduced the LONGi Energy Storage One-Stop. From iron-air batteries to molten salt storage, a new wave of energy storage innovation is unlocking long-duration, low-cost resilience for tomorrow's grid.
