

What kind of generator is used in the construction site cabinet

Overview

A construction-site generator set consists essentially of an internal combustion engine, generator (synchronous generator), control (e., AVR or inverter circuit), fuel system, control cabinet with protective devices, and connections for 230/400 V. Especially in demanding scenarios of concrete demolition, special demolition, or tunnel construction, a stable, safe, and adequately sized power source is. Generator Source specializes in low-hour, used, new, and surplus generator sets. We have a wide variety of generator sizes and models to fit any project. Call us today (877-866-6895) or click Contact Us to be connected with one of our experienced sales. There is always work going on at construction sites. Reliable power keeps the construction going, whether it's a tower going up in a congested city or a freeway being built across wide land. They are there when you need them and gone when you don't.
