

What size inverter should I use for a 30 kW solar system

Overview

Most solar professionals recommend sizing your inverter for solar panels between 75% and 115% of your total panel wattage, with the sweet spot around 1:1. Undersizing means tripped breakers and failed startups. This means your inverter doesn't need to power your entire home—it just converts whatever your panels generate. Every inverter has a MPPT voltage operating range — the DC voltage window within which the inverter can actively track maximum power point. This is typically listed as “MPPT voltage range”. Choosing the right solar inverter size is critical—and one of the most common questions: what solar inverter size do I need?

Whether you are installing a rooftop system in California, powering a remote cabin in Alberta, or sizing for a community center in Rajasthan, getting it right means. Formulas: Continuous inverter size = Load × (1 + margin).
